FLANGE BAND PROTECTORS

- Designed to seal flange internals and protect flange faces, stud bolts, and gaskets from the elements of corrosion.
- Keeps out moisture, chemicals, saltwater, acid rain, and sand.
- Keeps out debris and foreign matter, which can lodge and create a conductive bridge, thus compromising the entire cathodic protection system.
- Available in 316 stainless steel and Kydex® high performance plastic.
- Stainless steel worm gear clamp.
- Stainless steel grease injection fitting.
- Gasket liner of closed cell elastomer, maximum temperature of 250°F/121°C, maximum operating of 230°F/110°C.
- Removable plastic vent plug.
- Safety relief valve optional, bleeds at 5 psi.
- Available for all sizes and ratings of flanges.
- Optional liner of EPDM rubber, maximum temperature of 270°F/132°C, or PTFE, maximum temperature of 500°F/260°C.
- Available in 2" and 3" wide bands.
- Custom engineered designs available per application.
- We recommend using Drake Nut/Bolt Protection Caps & Corrosion Inhibitor Grease for a complete flange protection system.
